

# Sentinel Internal Intelligence. See what's happening on the inside.

Find compromised machines quickly.  
Identify and analyze your network's vulnerabilities.  
No equipment fees, no contract terms, and free to evaluate.

## Find the malware fast.

Both a Sentinel IDS and scanning tool, the Internal Intelligence unit is the perfect compliment to a Sentinel IPS, allowing you to easily identify compromised machines on the LAN, correlate alerts with your Sentinel IPS, and perform regular vulnerability scans.

## Find and fix your network's vulnerabilities.

The Internal Intelligence box can scan your internal network, utilizing the industry-leading Qualys scanning tools. In fact, you get an annual scan for free with your Sentinel Internal Intelligence subscription.

“With Sentinel, I sleep better at night.”

## Real, live support, 24 hours a day.

The Sentinel is monitored and managed 24 hours a day. We're here to help any time, whether the Sentinel is at the heart of the issue or not. An extra set of eyes. Real people that really care about you and your network. You simply won't get this level of personal support from anyone else.

## An extra layer of threat intelligence, only with Sentinel.

Collective Intelligence Network Security (CINS) leverages data gathered from our global network of Sentinels. CINS analyzes this threat intelligence and continually pushes current and timely reputation-based information back out to the Sentinel network. We like to call it **active threat intelligence**.

## Internal Intelligence Hardware and Installation

The Internal Intelligence unit is built atop a rock-solid Dell 1U server. It can accept mirrored traffic from a SPAN port or TAP, and utilizes a dedicated management port for access, monitoring, and updates.

## Sentinel IPS, CINS, and Internal Intelligence: Protection on the outside, eyes on the inside.

Bundled together, an external Sentinel IPS and the Internal Intelligence unit offer a formidable combination of protection and threat intelligence in one affordable package. And with available remote logging functionality, both units can easily integrate with your existing syslog or SEIM.
