

The **StoreMinder**. The next generation of Intrusion Prevention, perfect for grocery and retail store operations.

24/7 management, monitoring, and support.

CINS active threat intelligence.

No equipment fees, no contract terms, free to evaluate.

Managed IPS with stellar management and support.

Combining a state-of-the-art IPS with 24/7 management, monitoring, and stellar support. A modern, intuitive web interface. CINS active threat intelligence, providing protection you can't get anywhere else. Intrusion Prevention is never easy, but Sentinel IPS makes it easy for you.

A free Network Gateway Assessment.

A free, no-strings-attached evaluation of the Sentinel. A free certified ASV mapping scan. A chance to find active malware and misconfigured servers. See who is knocking on your network's door ... No risk, big reward.

The StoreMinder is ready for anything.

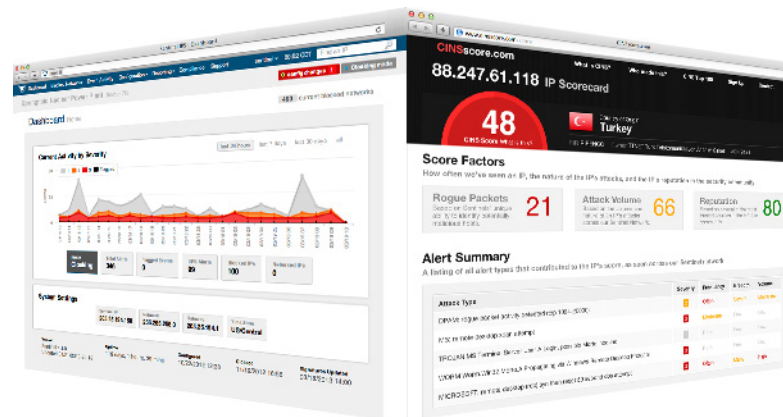

Its rugged industrial components are ready for any environment, and can be shelf- or rack-mounted. The StoreMinder's form-factor makes it perfect for small office, restaurant, grocery, or retail operations where server room space and flexibility are at a premium.

“With Sentinel, I sleep better at night.” - *Security Engineer for a city in Texas*

Product Options

The standard **StoreMinder** unit offers an effective blend of rock-solid hardware and affordability. For networks particularly sensitive to outages and downtime, our **Advanced** unit adds a blazing-fast Interface Masters bypass card that allows the unit to fail-to-wire - ideal when reliable Internet connectivity is the foremost concern.

High Availability. For redundant IPS security, we offer a unique inline High Availability solution. This configuration is perfect for networks that require reliable Internet connectivity without sacrificing security.

What is a typical installation?

Usually the Sentinel is installed as a **Layer 2 Bridge**, behind your network's router, and in front of your current firewall.

CINSscore.com

Living, breathing threat intelligence, in action.

Collective Intelligence Network Security (CINS) leverages data gathered from our global network to give each and every Sentinel an additional layer of protection only available to the Sentinel community. CINS analyzes threat intelligence from all our Sentinels, continually pushing the most current and timely reputation-based information back out to the Sentinel network. We like to call it **active threat intelligence**.
